EDUCATION

Chulalongkorn University **Expected May 2027**

Bachelor of Engineering in Computer Engineering | GPA 3.54

- Core Team of Google Developer Group on Campus: Technical Team
- Teaching Assistant: Database Systems, Software Engineering, Computer Networking

PROJECTS

UltimateAgent – AI agent with multimodal processing **Sep 2026 – Oct 2026**

Python, LangGraph, Gemini API, LangSmith, Pydantic

- Built a Python-based LangGraph ReAct agent integrating Gemini with seven tools for web research, file processing, multimodal analysis, and code execution.
- Implemented a Plan–Act–Verify prompt, execution step limits, and a separate Pydantic-based formatter for structured final answers.
- Improved accuracy from 60% to 85% on a 20-question GAIA Level 1 subset covering multi-step reasoning, web research, and multimodal understanding, using exact-match scoring against ground truth and LangSmith traces to guide debugging.

RoboTaxi – Agentic use case with tool-calling evaluation **Jun 2026 – Present**

Python, Pydantic, MLflow, BFCL v3

- Built a Python harness to evaluate OpenAI-compatible agents on BFCL v3 multi-turn tasks, supporting native tool calling, streaming, and state/call-path checks across 200 cases on test dataset.
- Measured 68.5% accuracy for Qwen on the multi-turn tool-calling test dataset and logged run parameters, accuracy, state/path pass rates, steps per turn, latency, per-case artifacts, and per-turn traces in MLflow.

CapyKnow 2.0 – AI learning assistant with PDF-based RAG **Oct 2025 – Nov 2025**

Python, FastAPI, PostgreSQL, pgvector, Jina AI, Chula Genie

- Developed a PDF processing pipeline combining text extraction, Gemini-based visual analysis, and Jina embeddings for document retrieval.
- Implemented RAG chat using PostgreSQL/pgvector similarity search and Chula Genie API, with persistent conversation history and streamed responses.

WORK EXPERIENCE

Advanced Info Service (AIS) **Jun 2026 – Jul 2026**

Cloud Engineer Intern | Cloud Governance and Analytics

- Used Python to ingest security findings and classify vulnerabilities by risk for remediation prioritization.
- Built cloud-cost anomaly baselines and a dashboard to investigate spending changes by account and service.

CBME-iPDM (Wannoi) - Precision Diabetes Management Platform **Dec 2025 – Present**

Research Assistant | Software Developer

- Resolved production issues across Go and Next.js and strengthened CI/CD with automated security gates for a clinical platform supporting a four-hospital collaboration.

ACTIVITY

Co-Speaker – Open the World of AI Workshop **Aug 2026**

Mahavajiravudh Songkhla School

- Co-delivered an AI workshop for Grade 10 students, introducing AI fundamentals and effective AI use.
- Guided students through the design-thinking process to develop AI-powered project concepts.

TECHNICAL SKILLS

- **Technologies**: Python, Node.js, Go, PostgreSQL, MongoDB, Docker, Git, GitHub Actions, AWS, Google Cloud Platform, LangGraph, LangSmith, Ollama, Hugging Face, MLflow, FastAPI, Pydantic
- **Skills**: Backend Development, CI/CD Pipeline Design, Containerization, REST API, AI in SDLC, Software Testing, Agile, LLM API integration, Loop Engineering, Prompt Engineering, Model Evaluation
